Perfection is unreachable. Even if we strive for it again and again. Vitruvius is just that: the pursuit of perfection shaped by the human spirit. Named after Vitruvius, the typeface seeks to unite ideal proportions. It has a lot of Garamond DNA in it and combines it with a high x-height. It is my modern interpretation of the French Renaissance Antiqua genre and the timeless masterpieces of the 15th and 16th centuries.

The journalist Suzy Menkes once wrote of Peter Lindbergh's work, "Refusing to bow to glossy perfection is Peter Lindbergh's trademark – the essence of the images that look into each person's unvarnished soul, however familiar or famous the sitter."

THE STATE

Birth and family

Little is known about Plato's early life and education. He belonged to an aristocratic and influential family. According to a disputed tradition, reported by doxographer Diogenes Laërtius, Plato's father Ariston traced his descent from the king of Athens, Codrus, and the king of Messenia, Melanthus. According to the ancient Hellenic tradition, Codrus was said to have been descended from the mythological deity Poseidon.

Through his mother, Plato was related to Solon. Plato's mother was Perictione, whose family boasted of a relationship with the famous Athenian lawmaker and lyric poet Solon, one of the seven sages, who repealed the laws of Draco (except for the death penalty for homicide). Perictione was sister of Charmides and niece of Critias, both prominent figures of the Thirty Tyrants, known as the Thirty, the brief oligarchic regime (404–403 BC), which followed on the collapse of Athens at the end of the Peloponnesian War (431–404 BC). According to some accounts, Ariston tried to force his attentions on Perictione, but failed in his purpose; then the god Apollo appeared to him in a vision, and as a result, Ariston left Perictione unmolested. The exact time and place of Plato's birth are unknown. Based on ancient sources, most modern scholars believe that he was born in Athens or Aegina between 429 and 423 BC, not long after the start of the Peloponnesian War. The traditional date of Plato's birth during the 87th or 88th Olympiad, 428 or 427 BC, is based on a dubious interpretation of Diogenes Laërtius, who says, "When Socrates was gone, Plato joined Cratylus the Heracleitean and Hermogenes, who philosophized in the manner of Parmenides. Then, at twenty-eight, Hermodorus says, Plato went to Euclides in Megara." However, as Debra Nails argues, the text does not state that Plato left for Megara immediately after joining Cratylus and Hermogenes. In his Seventh Letter, Plato notes that his coming of age coincided with the taking of power by the Thirty, remarking, "But a youth under the age of twenty made himself a laughingstock if he attempted to enter the political arena." Thus, Nails dates Plato's birth to 424/423.

The Name Plato

According to Neanthes, Plato was six years younger than Isocrates, and therefore was born the same year the prominent Athenian statesman Pericles died (429 BC). Jonathan Barnes regards 428 BC
