When I took my first steps as a graphic designer, sans-serif humanist fonts were all the rage. They were everywhere. As if there were no other fonts. A few years later, they disappeared completely from my radar - until the design of Nylo. The family is a tribute to my time as a young designer and at the same time tries to give this impressive genre the attention it deserves. Hello, nineties!

The image displays three lowercase letters, 'a', 'b', and 'g', in a bold, rounded, sans-serif typeface. The letters are white and set against a solid blue background. A vertical line is positioned to the right of the letter 'b'. Horizontal lines are drawn across the image at various heights, with numerical labels on the right side: 760, 700, 520, 0, and -200. The letter 'a' is positioned between the 520 and 700 lines. The letter 'b' is positioned between the 0 and 520 lines. The letter 'g' is positioned between the -200 and 0 lines.

43/44 pt

Earth is the  
third planet  
from the  
Sun.

---

22/25 pt

Earth is the third planet  
from the Sun and the  
only astronomical object  
known to harbor life.

---

12/15 pt

Earth is the third planet from the Sun and  
the only astronomical object known to  
harbor life. While large volumes of water  
can be found throughout the Solar System,  
only Earth sustains liquid surface water.  
About 71% of Earth's surface is made up of  
the ocean, dwarfing Earth's polar ice, lakes,  
and rivers. The remaining 29% of Earth's  
surface is land, consisting of continents

A large, bold, white letter 'S' is centered on a dark blue background. The background features a faint, high-angle photograph of a mountain range with snow-capped peaks and a winding river valley.

# MINI - DISC (MD)

FROM WIKIPEDIA  
THE *free* ENCYCLOPEDIA

## MARKET HISTORY

In 1983, just a year after the introduction of the Compact Disc, Kees Schouhamer Immink and Joseph Braat presented the first experiments with erasable magneto-optical Compact Discs during the 73rd AES Convention in Eindhoven. It took almost 10 years, however, before their idea was commercialized.

Sony's MiniDisc was one of two rival digital systems, both introduced in 1992, that were targeted as replacements for the Philips Compact Cassette analog audio tape system: the other was the Digital Compact Cassette (DCC), created by Philips and Matsushita (now Panasonic). Sony had originally intended the Digital Audio Tape (DAT) to be the dominant home digital audio recording format, replacing the analog cassette. Because of technical delays, the DAT was not launched until 1989, and by then the U.S. dollar had fallen so far against the yen that the introductory DAT machine Sony had intended to market for about \$400 in the late 1980s now had to retail for \$800 or even \$1000 to break even, putting it out of reach of most users.

## DESIGN

The disc is permanently housed in a cartridge (68×72×5 mm) with a sliding door, similar to the casing of a 3.5" floppy disk. This shutter is opened automatically by a mechanism upon insertion into a drive. MiniDiscs can either be recordable (blank) or pre-mastered. Recordable MiniDiscs use a magneto-optical system to write data: a laser below the disc heats a spot to its Curie point, making the material in the disc susceptible to a magnetic field. A magnetic head above the disc then alters the polarity of the heated area, recording the digital data onto the disk. Playback is accomplished with the laser alone: taking advantage of the magneto-optic Kerr effect, the player senses the polarization of the reflected light and thus interprets a 1 or a 0. Recordable MDs can be rerecorded repeatedly, with Sony claiming up to one million times. By May 2005, there were 60-minute, 74-minute and 80-minute discs available. 60-minute blanks, which were widely available in the early years of the format's introduction, were phased out and are now rarely seen.

EN ▾

One of the most elegant addresses in the city elevates living to the art of established connoisseurship. Nestled in a neighborhood that has always appreciated the fine arts, the building becomes a muse of finest materials and highest quality.

The Building brilliantly blends in with the existing development. The architecture reflects the neighborhood and its history. The façade, structured by column-framed balconies and the flanking loggias with floor-length windows, highlights the classy appeal. The natural stone façade of the base — in concert with the fine plaster façade of the upper floors — completes the overall architectural impression.
