mail to [hi@renebieder.com](mailto:hi@renebieder.com)

The early Grotesk typefaces were wild, unrestrained, and full of the spirit of the golden age of type design. The Freigeist family picks up from there and melts together the most important stages of the Grotesk style from 1850 to 1950 until the present day. Freigeist is an old typeface with young roots. A young spirit with the knowledge of an old man.

The monastery is disturbed by the death of Adelmo of Otranto, an illuminator revered for his illustrations. Adelmo was skilled at comical artwork, especially concerning religious matters. William is asked by the monastery's abbot<sup>1</sup>, Abo of Fossanova, to investigate the death: During his enquiry he has a debate with one of the oldest monks in the abbey, Jorge of Burgos, about the theological meaning of laughter, which Jorge despises.

The next day, a scholar of Aristotle<sup>2</sup> and translator of Greek and Arabic, Venantius of Salvemec, is found dead in a vat of pig's blood. Severinus of Sankt Wendel, the herbalist, tells William that Venantius's body had black stains on the tongue and fingers, which suggests poison. Benno of Uppsala, a rhetoric scholar, reveals to William that the librarian, Malachi of Hildesheim, and his assistant Berengar of Arundel, had a homosexual relationship, until Berengar seduced Adelmo, who committed suicide out of conflicting religious shame. The only other monks who knew about the indiscretions were Jorge and Venantius. In spite of Malachi prohibiting William and Adso from entering the labyrinthine library, they pen-

**1** Abbot is an ecclesiastical title given to the male head of a monastery in various Western religious traditions, including Christianity. The office may also be given as an honorary title to a clergyman who is not the head of a monastery. The female equivalent is abbess.

**2** Aristotle was a Greek philosopher and polymath during the Classical period in Ancient Greece. Taught by Plato, he was the founder of the Peripatetic school of philosophy within the Lyceum and the wider Aristotelian tradition.

P.O.

Proxima Centauri is a small, low-mass star located 4.2465 light-years (1.3020 pc) away from the Sun in the southern constellation of Centaurus. Its Latin name means the nearest of Centaurus. It was discovered in 1915 by Robert Innes and is the nearest-known star to the Sun. With a quiescent apparent magnitude 11.13, it is too faint to be seen with the unaided eye. Proxima Centauri is a member of the Alpha Centauri star system, being identified as component Alpha Centauri C, and is 2.18° to the southwest of the Alpha Centauri AB pair. It is currently 12,950 AU (0.2 ly) from AB, which it orbits with a period of about 550,000 years.

Proxima Centauri is a red dwarf star with a mass about 12.5% of the Sun's mass, and average density about 33 times that of the Sun. Because of Proxima Centauri's proximity to Earth, its angular diameter can be measured directly. Its actual diameter is about one-seventh (14%) the diameter of the Sun. Although it has a very low average luminosity, Proxima Centauri is a flare star that randomly undergoes dramatic increases in brightness because of magnetic activity.

The star's magnetic field is created by convection throughout the stellar body, and the resulting flare activity generates a total X-ray emission similar to that produced by the Sun. The internal mixing of its fuel by convection through its core, and Proxima's relatively low energy-production rate, mean that it will be a main-sequence star for another four trillion years.

Proxima Centauri has two known exoplanets and one candidate exoplanet: Proxima Centauri b, Proxima Centauri d and the disputed Proxima Centauri c. Proxima Centauri b orbits the star at a distance of roughly 0.05 AU (7.5 million km) with an orbital period of approximately 11.2 Earth days. Its estimated mass is at least 1.17 times that of Earth. Proxima b orbits within Proxima Centauri's habitable zone—the range where temperatures are right for liquid water to exist on its surface—but, because Proxima Centauri is a red dwarf and a
